

Nikhil Mishra

Entry level Full Stack Developer | React | Node.js | Next.js

[Phone](#) | [Email](#) | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

Summary

Entry-Level Full Stack Developer with strong hands-on experience building web applications through academic and personal projects using React, Next.js, Node.js, Express, and Flask. Experienced in developing REST APIs, implementing JWT authentication, and creating responsive user interfaces. Actively seeking an entry-level or internship role to contribute technical skills and grow in a professional software development environment.

Technical Skills

Programming: Python, JavaScript, C, C++

Frontend: React.js, React Native, Next.js, HTML5, CSS3, Responsive Design, TypeScript, Zustand, State Management

Backend: Node.js, Express.js, RESTful API, JWT, MVC architecture, NoSQL, MongoDB, Rate Limiting

Tools: Git, GitHub, Postman, Vercel

Academic & Personal Projects

TheJaAstro – Astrology Consultation App (Live: [\[Google Play link\]](#))

- Developed core frontend application flows using React Native, including authentication, wallet management, chat/call interfaces, and session state transitions.
- Designed protected navigation and client-side JWT handling to enforce authenticated access across user workflows.
- Implemented robust API integration for login, wallet updates, and session lifecycle management, ensuring reliable state synchronization and error handling.
- Optimized UI responsiveness and loading states to improve user experience during real-time interactions and network fluctuations.
- Collaborated on backend API validation and payment workflow testing to ensure accurate Razorpay transaction processing before production release.

Rate Limiting API System | Node.js, Express.js, JWT, Arcjet

GitHub: github.com/outbreak778/rate-limit-api

- Designed and developed a backend API system to control request frequency and prevent excessive usage during load-testing scenarios.
- Implemented [Arcjet](#)-based security controls including rate limiting, bot detection, and DDoS protection to safeguard backend APIs.
- Implemented JWT-based authentication to secure API endpoints and validate user access.
- Tested API reliability and request limits using Postman and logging mechanisms.

Pinterest-Inspired Full Stack Application | React.js, Node.js, Express.js, MongoDB

GitHub: github.com/outbreak778/pinterest-clone

- Developed a full-stack Pinterest-inspired web application supporting image sharing, user profiles, and protected routes using JWT authentication.
- Implemented secure session handling with HTTP-only cookies, CORS configuration, and credential-based authentication between frontend and backend.
- Built REST APIs for posts, users, and authentication, and deployed the frontend on Vercel and backend on Render.

Animated Landing Page | Next.js, Framer Motion, Tailwind CSS

GitHub: github.com/outbreak778/simple-saas-page

- Built a responsive landing page with smooth animations using Next.js and Framer Motion.
- Improved UI responsiveness and perceived load time by optimizing animation timing and component rendering.

Outbreak CLI – Developer Productivity Tool | Node.js, JavaScript, CLI Automation

GitHub: <https://github.com/outbreak778/custom-cli>

- Built a custom command-line interface (CLI) tool to scaffold Node.js projects and automate repetitive development tasks.
- Implemented configurable commands to generate project structures, reducing manual setup time for new projects.
- Designed the CLI for extensibility and ease of use, improving developer productivity during local development workflows.
- Added support for generating a complete MVC architecture setup using a single command, enabling faster and more consistent backend project initialization.

Education

Master of Computer Applications (MCA)

Sandip University, Nashik

CGPA: 8.16 / 10 | 2024 – 2026

Bachelor of Computer Applications (BCA)

Commerce management and Computer Science (CMCS), Nashik

CGPA: 7.68 / 10 | 2021 – 2024

Certifications & Achievements

- Gold Medalist – Technocase Hackathon
- Python Programming Certification – IIT Bombay
- Machine Learning with Python – IIT Bombay & Infosys Springboard

Additional Information

- Actively contribute to personal and open-source projects on GitHub, focusing on building scalable and well-structured applications.
- Comfortable working across the full development lifecycle, from requirement understanding to deployment and debugging.
- Comfortable adapting to new tools and frameworks based on project requirements.
