

SHASHI PRAKASH

Security Analyst • Penetration Testing • Vulnerability Management • AppSec
+91-9123478388 | sp123270@gmail.com | [Linkedin](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Cybersecurity professional with around 2years of experience in penetration testing, vulnerability management, and security assessment within a software development environment. Proficient in SIEM (Splunk, Wazuh), OWASP Top 10, MITRE ATT&CK, threat modelling, and secure SDLC. Identified and led remediation of critical vulnerabilities including SQL Injection and Broken Access Control (admin privilege escalation) across 20+ web applications; documented 40+ findings with risk-rated remediation guidance. Skilled in Python, Bash, SonarQube, and Linux. Pursuing MCA; active CTF practitioner on TryHackMe & HackTheBox.

TECHNICAL SKILLS

VAPT & AppSec: OWASP Top 10, Burp Suite, Nessus, OpenVAS, WAPT, DVWA, Metasploit, Penetration Testing, SQLi, XSS, IDOR, Broken Auth
SIEM & Monitoring: Splunk, Wazuh, ELK Stack, IBM QRadar, Microsoft Sentinel, Log Analysis, Threat Hunting, Alert Triage, IDS/IPS
Frameworks: MITRE ATT&CK, NIST CSF, CIS Controls, ISO 27001, Secure SDLC, Threat Modelling, Risk Assessment
Network & Endpoint: Wireshark, Nmap, TCP/IP, DNS, HTTP/HTTPS, Firewall Rules, Endpoint Security, Encryption, IAM, VPN
DevSecOps & Cloud: CI/CD Security, SAST, DAST, SonarQube, Docker, Kubernetes, Container Security, AWS, Azure
Scripting & OS: Python, Bash, PowerShell, Linux , Automation Scripting

PROFESSIONAL EXPERIENCE

Security Analyst – VAPT & Application Security | CSDT IT Solutions Apr 2024 – Present

- Performed VAPT (penetration testing) on 20+ web applications built in-house and for clients using Burp Suite, Nessus & OWASP Top 10; uncovered SQL Injection (SQLi), XSS, IDOR, and Broken Access Control — including an exposed admin self-registration flow enabling unauthorised privilege escalation to admin role.
- Managed end-to-end vulnerability management lifecycle — discovery, CVSS scoring, risk-rated reporting, and remediation coordination with developers; documented 40+ findings with reproduction steps and fix recommendations.
- Designed and executed security assessment plans for 15+ staging applications prior to release, achieving a 100% pass rate in internal pre-deployment security audits.
- Conducted source code reviews using SonarQube and manual analysis to surface injection flaws, hardcoded secrets, and insecure configurations; tracked remediation of 12+ high-severity findings across two quarters.
- Set up and monitored application and server logs using Splunk and Wazuh; configured detection rules, reviewed alerts for anomalous activity, and flagged suspicious patterns to the dev and infra team.
- Performed threat modelling on new features using MITRE ATT&CK and STRIDE; documented attack surfaces and mitigation steps to support secure design decisions within the development team.
- Assisted in integrating SAST/DAST scanning and SonarQube quality gates into the CI/CD pipeline, enabling automated security checks on every build.
- Mentored 2–3 junior team members on security testing workflows; maintained vulnerability tracking and assessment reports — achieving an 18% reduction in recurring vulnerability classes across quarterly reviews.

PROJECTS

CodeFortress CI — AI-Driven Autonomous DevSecOps Platform |

- Designed an AI-powered security intelligence system for CI/CD pipelines that predicts secret leaks, detects vulnerabilities, simulates attack paths via MITRE ATT&CK mapping, and enforces risk-based gate decisions using ML models and Neo4j security graph.
- Implemented automated CVSS-based risk scoring and self-healing architecture that auto-generates remediation patches and raises pull requests — reducing manual remediation effort.

SentinelSOC — Security Monitoring & Threat Detection Platform |

- Built a SOC-style monitoring platform using Node.js, OpenSearch, Prometheus, and Grafana to collect, parse, and visualise security logs and network events in real time.
- Implemented threat detection rules, brute-force attack simulation, and automated alert generation to monitor suspicious activity and attacker behaviour.

EDUCATION

MCA — Master of Computer Applications — Sikkim University, Gangtok, Sikkim 2024 – 2026
BCA — Bachelor of Computer Applications — L.N. Mishra Institute, Patna, Bihar 2021 – 2024

CERTIFICATIONS & ACHIEVEMENTS

Google Cybersecurity Certificate — Coursera | **Cisco: Introduction to Cybersecurity** — Cisco Networking Academy | **NPTEL: IoT & Machine Learning**
Mastercard Cybersecurity Virtual Experience (Forage) — Phishing Analysis & Threat Awareness | **Tata Cybersecurity Analyst** (Forage) — IAM & Security Architecture
Active CTF Practitioner — TryHackMe & HackTheBox | Hands-on labs: web exploitation, privilege escalation, network analysis & forensics
